Experience

2024-current **LANE CONSTRUCTION CORPORATION** **CHESHIRE, CT**

IT Director

- Led IT transition to Agile methodology. Facilitated adoption of Azure DevOps through training, demonstrations, FAQs, and utilized continuous feedback to improve the overall process.
- Oversaw $3MM annual IT budget. Achieved cost savings through eliminating redundant tools, contract renegotiations, and implementing AWS savings plans.
- Leading critical initiative to align Lane systems & tools with parent company standards to achieve cost savings and efficiencies. Scope includes migrating Lane's Oracle ERP to SAP along with evaluating and migrating all other key systems.
- Championed culture of learning and continuous improvement by incorporating training into Sprints and using automation to eliminate manual processes

2022-2024 **LANE CONSTRUCTION CORPORATION** **CHESHIRE, CT**

Solution Architect

- Led end-to-end solution architecture for enterprise wide global supply chain initiatives to digitize purchase requisition processing, digitize the procurement process, and integrate with the vendor master system
- Collaborated with cross-functional teams across procurement, vendor management, mechanical, materials management, compliance, and 3rd party developers to translate business requirements into technical solutions
- Led complex project that involved not just upgrading the DB for Lane's core ERP but also a tools release upgrade, retrofitting custom applications, updating impacted interfaces, upgrading key reporting platform and migrating it from on-premise to AWS

2018-2022 **LANE CONSTRUCTION CORPORATION** **CHESHIRE, CT**

Application Development Manager

- Manage development staff, business analysts, and contractors – prioritize issues/tasks and handle roadblocks to meet project deadlines
- Resolve production issues for Oracle ERP (encompassing all business critical functions), SharePoint, 3rd party applications, middleware, and custom applications and interfaces (REST APIs, JSON, VB .NET, HTML, JavaScript, windows shell scripts)
- Evaluate business requests to assess effort/complexity and design, develop and implement solutions
- Handle demand management and daily workflow through Jira kanban boards and Jira Advanced Roadmaps
- Utilize Confluence to document functional and technical specifications as well as share "How To' information amongst the team
- Leverage Agile principles to lead functional and IT teams through requirements gathering and solution design
- Experienced in writing SQL to analyze data and answer business questions
- Automate manual processes using UiPath
- Evaluating AWS functionality to determine appropriate path to shift on-premise applications and processing to the cloud

2013-2018 **GENERAL ELECTRIC** **NORWALK, CT**

Senior Project Manager – Source to Pay Development

- Responsibilities:
  - Manage a team of 9 GE employees and 34 contractors ($1.4MM budget)
  - Resolve production issues and implement enhancements for enterprise Source to Pay platform ($20 billion in spend, 100,000 users)
  - Translate business requirements into functional/technical specifications and design, develop and implement solutions
- Key projects include:

2 Way Match Initiative (2WM)

- Goal is to reduce the number of invoices going on hold due to receipts not being created
- Designed, developed and rolled out 2WM functionality across 118 Operating Units
- Significant positive impact:
  - $800,000 annual benefit across businesses
  - 'Paid on Time' metric improved from 83% to 95%
  - Receipt holds decreased from 43% to 10%
  - 10,000 receipt holds eliminated

Approval Simplification Initiative (ASI)

- Eliminated thousands of non-value add approvals from SSS system resulting in up to a 50% reduction in average requisition cycle time
- Enormous time-savings for users across all GE businesses
  - Example benefit (Aviation): Average cycle time for requisitions > $200,000 before simplification = 19.29 days. After simplification = 8.51 days (10.78 days less to approve)
- Reduced number of code extensions from 529 to 35 – simplifying future maintenance
- Project featured at year-end IT Showcase and received CIO recognition

SSS R12 Implementation

- Completed massive effort to re-implement 223 Operating Units from Oracle EBS 11i onto R12 (12.1.3)
- Developed and delivered workflow, OAF and RICE customizations critical to re-implementation phases

- Simplified code by eliminating 222 customizations (66% of existing inventory from 11i)

2010-2013 **GENERAL ELECTRIC** **FAIRFIELD, CT**

Lead Business Analyst – Corporate Sourcing

- Responsibilities as part of the GE Corporate Sourcing team:
  - Provide leadership to SSS systems development team on Corporate Sourcing initiatives
  - Implement solutions and ensure compliance of development projects with GE technology standards and strategies
- Key projects include:

Discount Optimization (Hadoop Proof of Concept)

- Utilized new, open-source technology to analyze 27,775 invoices and identify common causes for lost discount
- Identified opportunity to save $680,000 for Corporate US Operating Unit
- Led a cross-functional team (Operations, IT, Finance, Sourcing) through a successful pilot and delivered process into production

Improper Payment Prevention (IPP)

- Navigated competing Capital/Corporate/Healthcare business needs to pull together consolidated functional specification
- Led 21 Corporate teams through design, setup, testing and production go live
- Satisfied critical compliance requirement by ensuring high risk transactions were properly approved before payment

2006-2009 **GENERAL ELECTRIC CAPITAL CORPORATION** **STAMFORD, CT**

IT Project Manager

- Responsibilities as part of the GE Capital Headquarters team:
  - Lead project teams focused on delivering solutions and identifying cost saving opportunities for GE Capital businesses
  - Manage, monitor, and negotiate with external vendor resources to deliver project objectives
  - Establish a strong social community to share best practices and build a strong repository for business leverage
  - Manage the budgeting and reporting process for the VisionPLUS cost center
- Key projects include:

VisionPLUS (V+) 8.31 Release

- Achieved an 18% cost savings by leveraging existing test artifacts and strong vendor management
- Completed functional and regression testing of 35 core functional areas prior to global code release
- Executed 2,021 test conditions and managed a team of 16 offshore resources to successfully complete testing on budget
- Established Quality Center repository with 1,795 reusable test scripts for future leverage

VisionPLUS Testing Center of Excellence (CoE)

- Worked with peers in 6 countries to gather "Voice of Customer" to identify business need for a Testing CoE
- Created scoring matrix evaluating business testing maturity and identified opportunities that set the CoE's strategic direction for the next 18 months
- Established centralized repository and shared testing best practices that provided direct benefit to GE Capital businesses

2004-2006 **GENERAL ELECTRIC CAPITAL CORPORATION**

Information Management Leadership Program (IMLP)

- Chosen for highly selective two-year IT leadership development program rotating through different GE Capital businesses to gain broad technology and IT management experience. Only 26 candidates chosen globally.
- Successfully adapted to diverse cultures/languages while working 6-12 month rotations in Hungary, Singapore, Japan, and Latvia
- Led project teams and managed offshore vendors across multiple countries to successfully achieve a common goal.
- Key projects include:

IT Project Manager, Japan MC2 Conversion Project **SINGAPORE; TOKYO, JAPAN**

- Reconciled over 88 billion yen between ACOS and V+. Reconciliation outcome a critical decision point for live conversion.
- Automated manual process for verifying conversion mapping resulting in reduced time and effort for the finance team
- Received the 2006 GE Money Asia IT Excellence Award based on project achievements

IT Project Leader, Project Yellow Brick Road (V+ Mainframe Migration) **BUDAPEST, HUNGARY**

- Led a cross-functional business/operations/IT team through the requirements, design, development, and testing phases to achieve a successful migration. Project was completed in parallel with the implementation of another major interfacing system.
- Achieved $150,000 in cost savings per year and reduced mainframe processing costs by 40% for the Hungarian business

IT UAT Manager, Project Foxhunt (V+ Implementation) **RIGA, LATVIA**

- Led UAT testing effort for new V+ implementation in Latvia business
- Established test strategy, scope, scenarios, and execution schedule in conjunction with business, finance, and IT support teams
- Conducted user training sessions for V+ functionality and increased overall user independence and systems knowledge
